Professional Summary

Results-driven full stack developer with experience building scalable web applications. Strong background in JavaScript, backend development, and cloud technologies. Passionate about solving real-world problems through clean and efficient code.

Technical Skills

Languages: JavaScript, Python, Java, TypeScript, C#, PHP

Frontend: React, Next.js, HTML, CSS

Backend: Node.js, Express, Django

Databases: PostgreSQL, SQLite, MongoDB, Sql server, MySQL

Tools & DevOps: Git, Docker, AWS, CI/CD

Other: REST APIs, Microservices, Agile/Scrum, AI-powered software development

Professional Experience

Full Stack Developer – Hayakawa Electronics Corp

2024 – 2025

- Developed and maintained full-stack web applications using React, Laravel, Nextjs and Node.js
- Improved application performance by 40% through optimization techniques
- Built RESTful APIs and integrated third-party services
- Built an application that won the company's Kaizen competition.
- Maintained and enhanced all developed applications to ensure performance, reliability, and scalability.

Full Stack Developer – M.A Technology

2025 – Current

- Developed an admin system that enabled employees to digitally submit requests and log time in/out, replacing manual form processing and approval workflows.
- Built a Bill of Materials (BOM) system that centralized product component data and material requirements for improved tracking and organization.
- Designed, developed, and maintained full-stack systems using Next.js and Laravel, including an admin platform for digital employee requests and time tracking, and a Bill of Materials (BOM) system for product component management; implemented server-side rendering (SSR) and API routes in Next.js, built RESTful APIs with Laravel, optimized database queries and schema design,

and improved system performance, data accuracy, and workflow efficiency by eliminating manual processes.

Projects

Item Borrowing Management System (Next.js, Laravel, MySQL)

- Developed a full-stack system to track and manage company asset borrowing with real-time status updates
- Implemented interactive features including in-app chat, notifications, and user activity tracking
- Designed RESTful APIs and optimized database queries to ensure efficient data handling

GitHub: github.com/Chapunk1620/techLoan

Point of Sale (POS) System (Next.js, Laravel, MySQL)

- Built a POS system to record and manage company purchases with structured approval workflows
- Integrated notification system for approval updates and transaction tracking
- Ensured data integrity and performance through backend validation and optimized queries

GitHub: github.com/Chapunk1620/POSystem

Plant Mapping System (Php, Javascript, MySQL)

- Developed a full-stack plant mapping system with interactive geolocation features
- Implemented dynamic map visualization to track plant locations and display detailed information
- Integrated mapping APIs and optimized frontend rendering for smooth user interaction

Bill of Materials (BOM) System (Next.js, Laravel, SQL Server)

- Designed and developed a BOM system to manage product components and material requirements
- Centralized data for improved tracking, planning, and accuracy of company resources
- Optimized database structure and queries for efficient data retrieval and scalability

GitHub: github.com/Chapunk1620/BOMSystem

Admin Request & Workflow System (Next.js, Laravel, SQL Server)

- Built an admin system that digitized employee form requests and time tracking processes
- Replaced manual workflows with automated approval systems and real-time notifications
- Improved operational efficiency and reduced processing time through system automation

GitHub: github.com/Chapunk1620/administrativeSystem

Education

Bachelor of Information Technology
Cavite State University
